

Re Move™

- Helps support the body's normal process to remove ingested toxins
- Contains prebiotic

A proprietary blend of [Mycosorb® A+, Actigen®, containing *Saccharomyces cerevisiae*, and powdered coconut oil (Power Stance®)] 20g.

Add to feed

Morning feed: half of 0.7oz scoop

Evening feed: half of 0.7oz scoop

This container lasts one horse approximately 201 days

Severe condition:

Morning feed: one and half of 0.7oz scoop

Evening feed: one and half of 0.7oz scoop

This container lasts one horse approximately 67 days

What is Re Move™?

Re Move™ has been formulated from specific ingredients that may bind harmful mycotoxins in the horse's digestive tract during periods of high mycotoxin contamination. Re Move™ is designed to bind to the polar and non-polar mycotoxins.

What is a Mycotoxin?

Mycotoxins can be found in the fungi that grow on some grasses--mainly paspalum, rye, couch and some weeds and clover. More than 500 mycotoxins have been identified to date. They are more prevalent in hot and humid conditions (spring and summer) and can also be found in some commercial feeds and hays.

About the Ingredients

Mycosorb A+ contains two main ingredients; a specific strain of yeast and algae meal. Mycotoxins are thought to bind to this strain of yeast, thus removing them from the horse's digestive tract. The algae are also thought to target and absorb different types of toxins, removing a wider range of toxins when combined.

Actigen and Ecocell are strains of yeast containing Mannan Oligosaccharides (MOS). MOS are considered a prebiotic and are thought to promote the growth of healthy gut bacteria in the hindgut. They may also boost the immune function in the digestive tract.

Power Stance® is a powdered coconut oil. It may have antimicrobial actions from the lauric acid for optimizing gut health, maintaining appetite and normal digestive function.

Signs of Mycotoxin poisoning

Symptoms can vary widely but may include:

- Itchy skin and/or hair loss
- Scabby sores
- Stiffness
- String halt/staggers
- Wasted topline
- Sunburnt nose
- Persistent cough
- Odd sweating
- Coarse, dull coat
- Persistent greasy heel/rain scald
- Unexplained spookiness and dangerous behavior

Mycotoxin poisoning may also cause the following without any obvious signs:

- Depleted minerals in the body
- Decreased immune function
- Negative impact on the kidneys, liver and reproductive system
- Severe cases can lead to death
